How does this affect me?

Modern web users have a short attention span and expect a fast and seamless website experience. Delivering that fast experience can result in more traffic, more conversions, and more happiness.

As if you didn't need more incentive, **Google use Page Speed and Page Experience (including Web Vitals) signals in their ranking algorithm.**

The chart displays various performance metrics for a web page over a period of time. The metrics are plotted against time, with the x-axis showing time in 30-second intervals from 02:32AM to 02:34AM. The y-axis shows the values for these metrics, with the left side in seconds (0.0s to 2.0s) and the right side in a unitless scale (0.00 to 0.02). The metrics are: Time to First Byte (blue), First Contentful Paint (cyan), Largest Contentful Paint (dark blue), Onload Time (maroon), Time to Interactive (purple), Fully Loaded (dark red), Total Blocking Time (dark purple), Speed Index (pink), and Cumulative Layout Shift (green). The chart shows that the page is fully loaded and interactive by 02:32AM, and the performance metrics remain stable over time.
